### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burroughs et al (5921038) in view of Bates Jr. (2648107).

Burroughs et al shows a sill pan assembly (figures 4-5) for installation below a sill and providing a moisture barrier and including an elongate pane member (60), the member including inclined channel surfaces (70) transversely one some of the pan members for the collection of moisture, the inclined channel surfaces each terminating at an extremity of the elongate pan member, upright channel surfaces on the said pan member contiguous with the one or more inclined channel surfaces for passage of moisture from the last mentioned surfaces for discharge away from a building structure, the upright channel surfaces being contiguous with the sloped channel surfaces.

Burroughs et al does not show the assembly including a plurality of pan members partially overlapping one another.

Bates Jr. discloses a pane assembly including a plurality of pan members partially overlapping one another (col 2 lines 40-53) to enable the compensation for windowsill of a length of the length short of the standard length of the sill.

It would have been obvious to one having ordinary skill in the art at the time of the invention to modify Burroughs et al's structure to show the assembly including a plurality of pan

members partially overlapping one another because it would enable the pan assembly to compensate for window sill of a length of the length short of the standard length of the sill as taught by Bates Jr.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art shows different pan assemblies.
